What's inside

01 Welcome

Who this is for, and the heart of the role

02 Your role at a glance

What you tend, and the one loop it comes down to

03 Getting started

Signing in, finding your tools, your languages

04 What you can and cannot do

Your access, spelled out plainly

05 A tour of your dashboard

Every screen you can open, and what it's for

06 Core workflows

Approving translations, auditing, flagging, feedback

07 How your changes reach readers

The two paths — instant flags and pull requests

08 Ways of working well

The habits that keep a language trustworthy

09 What stays with the founder

The levers reserved for the super admin

10 Help, and a glossary

Where to turn, and the words we use

Welcome

Ochorus is a free reader for the great public-domain Christian classics — on the web and on phones, in many languages. You have been trusted with something specific and precious: the care of Ochorus in a language you know from the inside.

Most of Ochorus's translations begin as careful machine drafts. They are honest, but they are not yet vouched for. A machine can render a sentence; it cannot feel whether it lands the way a native reader hears it, or whether a verse reads as Scripture rather than as prose. That judgement is yours. As a **language administrator** you read the work in your languages, tell us what is ready and what still needs a human hand, and — when you are satisfied — put your name to it so a reader can trust it.

The heart of the role

Read

Move through a book, a sermon, or a reader's suggestion in your language, the way a reader would.

Flag

When something is off, you don't rewrite production. You file a precise note that becomes a proper fix.

Approve

When a translation genuinely reads well, you approve it — the moment a draft becomes something a reader can trust.

Repeat

Work by work, the library grows more faithful and more beautiful in the tongues you serve.

A STEWARD, NOT AN EDITOR

You will notice you cannot type new text straight into a live book. That is by design — Ochorus's pages are built from committed source files so nothing changes under a reader unseen. Your edits travel a safe path (Chapter Seven). Think of yourself as the one who *catches* and *vouches*, while the machinery does the writing-out.

Your role at a glance

Everything here serves one sentence: you keep the library trustworthy in your languages, by reviewing what is drafted and flagging what is wrong — without ever having to touch production directly.

What you tend

- **Translations awaiting review** — books, sermons and biographies drafted by the AI pipeline, waiting for a native speaker to approve them or send them back.
- **Content quality** — titles, paragraphs and text that read wrong, which you flag for a clean fix.
- **What's live** — whether a particular edition is shown to readers.
- **Reader suggestions** — if your founder gives you the feedback queue, the ideas and corrections readers send in.

Your scope

Your access is **scoped to your languages** — nothing else. The queues, filters and screens show you only your languages, and the tools quietly refuse anything outside them. You never see readers' personal information, and you never touch another language's work.

THE ONE RULE ABOVE ALL OTHERS

Never approve a translation you have not truly read. The whole point of your approval is that a *human who knows the language* has vouched for it. Rubber-stamping doesn't just pass a bad sentence — it empties the promise your approval makes to every reader after you.

Getting started

- 1 **Sign in to Ochorus** with the account your founder granted access to — the same account you read with.
- 2 **Open your avatar** (top-right). Because you have admin access, the menu now shows a **Language Admin** link the ordinary reader never sees — and, right beneath it, this manual.
- 3 **Land on your dashboard.** A left-hand rail lists only the screens your access opens, so your console is naturally calmer than the founder's.
- 4 **Read "Help & roles"** (bottom of the rail) any time you want a reminder of exactly what your account can do today.

Your dashboard — the library at a glance, and a rail trimmed to your languages.

IF A SCREEN SAYS "NOT AUTHORISED"

You've reached a tool outside your grant or your languages — the system doing its job, not a fault. If you believe you need it, ask your founder; access is a single line for them to add.

What you can and cannot do

Here is your access in plain words. Everything below is scoped to your languages unless it is naturally global (like viewing a report).

What you can do

YOU CAN...	WHICH MEANS
Approve & return translations	Work the review queue: mark a drafted book, sermon or bio as reviewed, or send it back as "needs work". Your signature task.
Confirm others' review work	Where a contributor proposed a decision, you can confirm it — a second pair of eyes before a reader sees it.
Work the content audit	See the quality checker's findings for your languages and accept or dismiss each one.
Flag content fixes	Ask for a title, a chapter's text, or a missing biography to be corrected — filed as a job that becomes a clean pull request.
Request translations	Queue a work to be translated into one of your languages.
Publish & unpublish editions	Show or hide a particular edition in your languages, instantly.
Tend author records	Act on the authors behind the works in your languages.
View reports & your language cockpit	See the dashboard, coverage, language-health and your language's own readiness page (read-only).

GRANTED SEPARATELY, IF YOUR FOUNDER CHOOSES

The reader-feedback queue. Triaging the suggestions readers send in is its own grant. If your founder gives it to you, an extra "Feedback" screen appears; Chapter Six shows it.

What you cannot do

YOU CANNOT...	WHY IT'S RESERVED
✗ See readers' personal data	Names, emails and sign-in details are a separate, higher grant. Privacy by default.
✗ Send emails or broadcasts	Reaching every reader's inbox is a heavy, one-way action kept with the founder.
✗ Import documents	Raw ingestion is a super-admin task; your work is quality in your languages, not intake.
✗ Grant or remove anyone's access	Managing the team is undelegated — only the super admin does it.
✗ Take a language live, or change its thresholds	Going live is a public commitment; you can see readiness but not flip the switch.
✗ Touch a language you don't tend	Your scope is enforced on every request, per item.
✗ Rewrite live text directly	By design — content ships from committed source files. You flag; the pipeline writes it out.

A tour of your dashboard

Your left-hand rail shows only what your access opens. Here is each screen you may see, and what it's for.

Dashboard

Your landing page — the state of the library at a glance, and chips pointing you to what needs attention in your languages: unreviewed translations, unpublished works, authors without a bio.

Coverage matrix & Language health

Coverage is a grid of every work against every language, so you can see where your languages are complete and where the gaps are. Language health rolls interface, content, review and engagement into one ranked readiness score — your bird's-eye view.

Language health — a ranked readiness score for every language.

Your language cockpit

Open your own language to see its readiness in detail: what's translated, what's reviewed, what's still outstanding, and the requirements it must meet. You can read everything here; the heavier levers — thresholds, going live — stay with the founder.

The screenshot shows the Ochorus Language Admin interface for the Luganda language. The sidebar on the left contains navigation links: Dashboard, Coverage matrix, Language health, Review queue, Feedback, Content audit, Activity, Engagement, Search, and Help & roles. The main content area is titled 'Luganda' and includes a 'Readiness' section with a list of checks and their status:

- ✓ Bible: Open Luganda Contemporary Bible (OLCB) resolves.
- ✓ Bible attribution: CC BY-SA 4.0 credit line configured. Confirm the same text is in frontend/src/lib/bibleCredit.ts — that is what renders it.
- ✓ Glossary: All 11 theological terms defined.
- ✓ Interface strings: All 961 translated.
- ✓ Books: 32 of 5 books.
- Sermons: No minimum set — 28 sermons present.
- ✗ Biographies: 0 biographies — needs 3.
- Reading plans: No minimum set — 0 plans present.
- ✗ Topic shelves: 11 of 33 translated — an untranslated shelf is hidden in this language, so the topics page would be short.

Below the readiness section is 'THE BAR FOR THIS LANGUAGE' section, which includes input fields for Books (5), Sermons (0), Biographies (3), and Plans (0). There are also checkboxes for 'All topic shelves translated' and 'Interface fully translated'. At the bottom, there is a 'Live' button and a 'Has it shipped?' button.

The language cockpit — Luganda's readiness, in detail (read-only for you).

Review queue, Content audit & Feedback

The three screens where most of your work happens — each has its own walkthrough in Chapter Six.

Activity, Engagement & Search

Read-only windows on what's happening — recent admin activity, how readers use the library, and what they search for. Useful context for where your attention is most needed.

Core workflows

The step-by-step of the everyday. Start with the first — it is the reason the role exists.

6.1 • Approving a translation

When the pipeline translates a work, it ships marked *awaiting native review*, and a reader sees that badge until a human clears it. Clearing it is your call.

- 1 Open the **Review queue** and filter to one of your languages.
- 2 Pick a work and **read it as a reader would** — listening for whether it reads naturally and whether Scripture reads as Scripture. The checks on each row only say the machine found nothing, never that the prose is good.
- 3 If it reads well, **approve** it — the badge clears. If it doesn't, mark it **needs work** and leave a note saying why.

Review

The review queue — translations awaiting a native-speaker check, grouped by language.

DO NOT RUBBER-STAMP

Approving is not a queue to empty; it is a promise to keep. Approve only what you have truly read. An unread approval is worse than no approval, because it looks exactly like a real one.

6.2 · Working the content audit

The audit flags likely quality problems automatically. Your job is judgement over each one: accept a finding that is actually fine so it stops nagging, or flag a genuine problem for a fix (6.3).

OUR MISSION

Free classic Christian books online — and printed books given out at conferences, churches, schools, and prisons across East Africa.

A ministry since 2021 · Victoria, BC, Canada

The content audit — automatic quality findings, to accept or flag.

6.3 • Flagging a content fix

When a title is wrong, a chapter reads badly, or an author has no biography, you file a precise job — **Fix title**, **Flag text**, or **Request bio**. You are not writing the fix; you are pointing at exactly what needs one, and a worker turns it into a proper, reviewable change (Chapter Seven).

6.4 • Requesting a translation & publishing

From a work not yet in one of your languages, queue a translation — the pipeline produces a fresh draft that returns to you at 6.1. And **publish** / **unpublish** is the one instant, live content change: hold back an edition that isn't ready, or bring one forward once it is.

6.5 • The reader-feedback queue *(if granted)*

Readers can send suggestions from anywhere on the site, each tagged with where they were — which book, which chapter, which language.

Ochorus — Language Administrator's Manual

13

- 1 Open **Feedback** and filter by status or type.
- 2 Read the suggestion; a badge marks trusted submitters, so a native reviewer's note rises to the top.
- 3 **Set a status, assign it to yourself, and leave a note** — every change is recorded. Where a suggestion is really a content problem, flag it as a fix (6.3).

The screenshot displays the Ochorus Language Admin interface. On the left is a sidebar with navigation links: Dashboard, Coverage matrix, Language health, Review queue, **Feedback** (highlighted), Content audit, Activity, Engagement, Search, Help & roles, and a View site link. The main content area is titled "Reader feedback" with a subtitle "Suggestions from readers and language admins. Triage each one; changes are audited." Below the title are filters for status: All (5), new (2), triaging (1), planned (1), and done (1). A dropdown menu shows "All types". Three feedback items are listed:

- bug** from joan.b@example.com about a "Listen" button overlap on a mobile device. Status: **done**. A "Save note" button is present.
- feature** from peter.o@example.com about remembering the current book. Status: **new**. A "Save note" button is present.
- content** from mary.a@example.com about a missing line break in a sermon opening paragraph. Status: **planned**. A "Save note" button is present.

Each item includes a status dropdown, an "Assign to me" button, and a text area for notes.

The feedback queue — reader suggestions to triage, filter and assign.

How your changes reach readers

Understanding this makes the whole role click: your actions travel two different roads, and knowing which is which explains why you flag some things and simply toggle others.

The instant road

Approving a translation, accepting an audit finding, and publishing or unpublishing an edition change a live setting straight away. Safe to do directly; they take effect the moment you act.

The careful road

Fixing a title, a chapter's text, or a biography changes the *source* the library is built from. So instead of editing production, you file a job — and a worker turns it into a reviewable pull request that ships the change properly.

This is why you cannot type a correction straight into a live book, and why that is a feature. Ochorus's reader pages are pre-built from committed source files, with no editing credentials in production at all. A change that skipped the source would vanish at the next rebuild — or reach one language and not its translations. The careful road keeps every language honest.

THE BADGE YOU'RE CLEARING

An unreviewed translation wears an *"awaiting native review"* badge that readers can see. Your approval is precisely what removes it. Never present an unreviewed translation as an original, and never clear the badge for a language you don't truly read.

Ways of working well

A few habits separate a language readers can lean on from one that merely looks finished.

Read before you approve — every time.

The single habit the whole system rests on. If you haven't read it, it isn't reviewed.

Flag precisely; don't fix in a hurry.

A clear, specific job travels the careful road and lands as a clean change in every affected language. A rushed in-place edit helps no one downstream.

Lean on maker-checker as the team grows.

Your ability to *confirm* another person's review decision lets a contributor do the first pass and you the second — doubling the care without doubling the work.

Trust your scope.

You are meant to see only your languages and no reader data. That's not the tool holding you back — it's the tool keeping your responsibility clear and your conscience clean.

When in doubt, send it back.

"Needs work" with a kind, specific note is never the wrong call. A translation can always be approved tomorrow; an approval is hard to unsay.

What stays with the founder

A short list, so you know where the edges of your role are — and who to ask when you reach one.

- **Taking a language live** and setting its readiness thresholds.
- **Creating a new language** or changing a language's settings.
- **Importing documents** — raw ingestion of new works.
- **Managing the team** — granting or revoking anyone's access, yours included.
- **Readers' personal data** — names, emails, sign-in providers.
- **Email & broadcasts** — anything that reaches readers' inboxes.

If your work runs up against one of these — you think a language is ready to go live, or you need access to something new — that's a conversation with your founder, usually a one-line change on their side. You surface the judgement; they pull the lever.

Help, and a glossary

Where to turn

- **"Help & roles"** in your admin rail — a live description of what your own account can do right now.
- **The feedback button** — you're a reader too; use it to send your own suggestions and questions straight into the queue.
- **Your founder** — for access, for going live, and for anything reserved above.

The words we use

Awaiting native review

A translation drafted by the AI pipeline that no human native speaker has yet vouched for. Readers see a badge; your approval clears it.

Reviewed / approved

A translation a language admin has read and vouched for.

Review queue

The screen listing everything awaiting a native-speaker check.

Content-edit job

A precise request to fix a title, a chapter's text, or a biography — the careful road that becomes a reviewable change rather than a live edit.

Translation job

A request to translate a work into one of your languages.

Edition

One work in one language. Publishing acts on a single edition.

Scope

The set of languages your access covers. Every tool limits itself to it.

Super admin

The founder — the account that holds every lever.

Thank you for tending Ochorus with such care.
